

CADENCE WMS

For 3rd Party Logistics (3PL)

Warehouse Management Solutions

 **CADRE**
TECHNOLOGIES

End-to-end Warehouse Processes

From Order Capture to Delivery...and all points in-between.

Cadence Warehouse Management software is designed to manage the full spectrum of activities, assets and facilities – in the warehouse, on the Internet and in transit. Cadence gives you control of orders from all sources (EDI, ERP, Web storefronts); inventory and operational control; and flexible execution of all logistics operations.

Order Capture

Catch orders from all directions.

Orders come from everywhere... websites, shopping carts (Shopify, Magento, Amazon...) storefronts, call centers, inside sales, EDI and ERP systems.

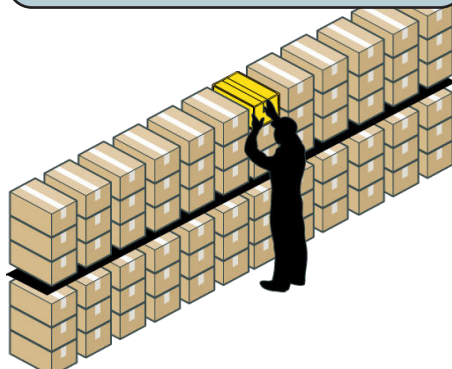

With our integration capabilities using Cadence Data Interchange (CDI) your system can quickly be connected to any order channel.

Cadence consolidates orders into a single Order Management System to prioritize processing and direct fulfillment operations.

Total order, inventory and operational visibility.

Provide visibility and order entry portal to customers and managers via the Cadence customer portal (WebAccess). Stakeholders can initiate orders, check inventory, view shipments and monitor activities in real-time via a browser on any device.

Warehouse Operations

Put products in their place.

Location. Location. Location. Receiving inbound shipments and putting inventory in the right place is essential to orderly fulfillment. Cadence manages where products go depending on velocity, expected demand and picking rules.

Cadence WMS helps you manage all the functions of today's warehouse: from receiving to putaway; picking to replenishment; and lot/serial number control to cycle counting. Workers receive specific, real-time instructions on the floor via wireless RF devices and mobile connectivity.

In-house or 3rd party logistics and fulfillment.

Cadence serves multiple business models under the same roof and in multiple locations from a single implementation... standard business to business, direct to store or direct to consumer.

Shipping

Multi-carrier shipping

Cadence integrates with FedEx Ship Manager and UPS WorldShip. If you are currently using a multi-carrier shipping software, we can integrate with that as well as other Transportation Management Systems.

In the cloud and on the ground.

Cadence can be implemented on-premise or in the cloud. Our hosting partner, Meridian IT (www.meridianitinc.com) provides comprehensive infrastructure with 24/7 monitoring, backup and preventative maintenance. It can also be deployed to remote warehouses and facilities from a single installation.

Fulfillment is all about throughput

Cadence creates rhythm in your warehouse

When the warehouse management system is humming along, you can pick, pack and ship a massive volume of orders. The boxes seem to march to the beat. Workers know where products are and where they need to go. Cadence orchestrates the entire production.

Web Access/Web Orders

- Customer service 24/7 portal
- eCommerce storefront
- Remote Operations
- Inventory/operations visibility/reporting
- Manage inbound / outbound schedules via dashboard
